Feature Enhancements

1. A new category was added to the reports menu called “PwrSmart Reports”. Four new reports (based ones in PwrSmart Service) were added:
 - a. Total Energy Savings (by Group)
 - b. Total Energy Savings (by Scheme)
 - c. Greenhouse Gas Equivalent (by Group)
 - d. Greenhouse Gas Equivalent (by Scheme)
2. PwrSmart server licenses can now be added to a channel. This allows existing servers in managed subnets to act as “Wake on LAN agents” for that subnet, eliminating the need to always have at least one workstation awake to handle WOL events. **Note:** Power schemes will never be enforced on servers, even if a scheme is inadvertently assigned to a server.

Bug Fixes

1. It is now possible to compare energy savings of the All Computers group.
2. The link to the PwrSmart Tutorial has been fixed.
